Linux News - June 2010

Puppy Linux 5.0 is out

The latest version of Puppy Linux came out, moving to the Ubuntu package framework. Anyone tried this? If so, how does moving to Ubuntu change things?

Google rumored to move to Linux/Mac

It is rumored Google may be moving all of its internal employees from Windows/Linux/Mac to just Linux and Mac. This is because of alleged security vulnerabilities in Windows and probably directly a result of the attacks from China. Thoughts?
