## **TVW Group Debuts “Ubuntu In The Clouds” the worlds first on demand cloud based virtual computers for the computer enthusiast market.**

TINLEY PARK, IL. May 4, 2009 -- TVW Group, LLC, the leading innovator in virtual desktop infrastructure hosting solutions, has released its end-to-end cloud computing solution for IT professionals, computer enthusiasts and the Ubuntu/Linux user group demographic. In this beta test, the hosted cloud based desktops will be running the world's most popular Linux operating system **Ubuntu 8.04 Long Term Support**. Out of the box, TVW Group has implemented features such as cross platform printing (from an Ubuntu hosted desktop “In The Cloud” to a physical Windows XP computer). In the coming weeks, “TVW Group will unveil an intuitive but advanced user defined backup and restore technology which has never been deployed outside of the enterprise until now”, said Vince Stewart, CEO at TVW Group.

Why cloud computing? TVW Group understands that computer users rely on their computer systems to provide 100% availability which is unrealistic. What's at risk is the loss of data and a loss of productivity. TVW Group addresses these risks by debuting the world's first "On Demand" cloud based virtual desktop computers addressing the following needs: 1) The need to easily and instantly access a full blown, mission critical, Linux desktop over the internet. 2) The need to defer capital outlays for computer purchases in tough economic times. 3) The need for one's online operating system and online documents to be protected. 4) The need to easily access one's online files regardless of computer platform. 5) The requirement for a hosting platform that provides 24x7x365 uptime at an affordable price.

Using Ubuntu in the Clouds, subscribers are able to install any open source software in their Ubuntu hosted desktop as the operating system and all of the applications are free. Subscribers will also be provided with additional value added services to extend the usefulness of their cloud based hosted desktops for a nominal fee. The first of these value added services is technical support provided by 3rd party vendors to assist users with many of their Ubuntu questions. TVW will also provide cross platform printing from an Ubuntu virtual computer to a Windows physical printer, with PDF conversion and auto preview options before printing. TVW Group, with this cross platform access, enables enthusiasts to prolong the life of aging computers because all of the compute power is performed on enterprise class HP Proliant servers with the AMD Quad Core chips running at 2.3 GHz.

TVW Group also makes it possible for organizations to reduce capital costs for computers and ultimately move to a thin client model of computing. This hosted desktop solution is ideal for technical training sessions and disaster recovery solutions for primary operations. This hosted solution is perfect for the Small to Medium Sized Business (SMB) market where hiring full time IT talent can be a challenge. IT professionals that migrate their SMB clients' to this Open Source platform can create ancillary professional service recurring revenue streams.

Join the growing number of “Ubuntu in the Clouds” users by signing up today to become a beta tester and to be notified when new, cutting edge 3rd party solutions become available. Complete the survey at [www.TVWGroup.net](http://www.TVWGroup.net) and get a complimentary Ubuntu mission critical virtual computer.

About TVW Group, LLC.

TVW Group headquartered in Tinley Park, IL, formed in June of 2006, is redefining the face of virtual computing by being the first to successfully host “Ubuntu Desktop” in the cloud. TVW Group has come out of stealth mode and has forever transformed traditional computing paradigms. For more information, visit [www.TVWGroup.net](http://www.TVWGroup.net).
